SUMMARY

Business Intelligence and Product Analytics leader with a decade of experience scaling profitability through advanced data modeling and now AI implementation and prompt engineering. Combining deep technical proficiency in SQL, Python, and Power BI with cross-functional project management, I lead transformative product initiatives. I specialize in moving organizations beyond passive reporting to engineer strategic decision engines that challenge assumptions, eliminate structural waste, and unlock multi-million-dollar business value.

Technical proficiency: SQL, Power BI, Python, Segment CDP, Snowflake, VS Code, Codex, Tableau, GitHub, SAP BW, Asana, Generative AI, Alteryx, Segment, MS Office Products

CORE COMPETENCIES

- | | | | |
|--|-------------------------------|----------------------------|-----------------------------|
| • AI Prompt Engineering | • A/B & MAB Testing | • Full-Funnel Optimization | • Data Science Modeling |
| • Customer Retention & Cohort Analysis | • Customer Segmentation (RFM) | • Price Variance Analysis | • Predictive Churn Modeling |

PROFESSIONAL EXPERIENCE

AI Engineering & Product Analytics

February 2022–Present

Pearl (JustAnswer Inc.) — Online platform that combines AI and human experts to provide verified answers to complex questions

Product Strategy & Revenue Growth

- **Macro Revenue Decompositions:** Decoded an \$8M–\$15M+ YoY increase in contribution margin by engineering an end-to-end, multi-dimensional full-funnel decomposition across domain type, vertical, channel, country, device, and funnel type. Proved domestic margin expansion was operationally powered by Javatar platform growth (seven-figure expansion) and Japan scaling (seven-figure expansion).
- **Telehealth Standalone Optimization:** Created Power BI profiles and 3-year LTV frameworks for the Telehealth and Urgent Care vertical. Proved cross-sell therapy rates sat at near-zero (<0.2%), successfully shifting product focus to standalone optimizations.

Marketing & Customer Acquisition Analytics

- **Performance Max Incrementality Study:** Evaluated keyword cannibalization, proving Performance Max was a net-positive expansion layer that generated over 1M+ net-new queries, \$1M+ incremental revenue, and a six-figure margin.
- **Geographic PPC Portfolio Design:** Reconstructed paid search funnels to ZIP levels, identifying 5.2% structural traffic waste while reallocating budget to high-efficiency Rural segments yielding 3.73% landing page conversion rates (LPCR).
- **Health Vertical & Creative Optimization:** Engineered a data pipeline combining granular Google Ads UI asset text data with backend SQL tables. Conducted Healthcare N-Gram and Headline analysis across 17,000+ vertical conversations, isolating key semantic drivers of profitability and pinpointing negative-margin headlines to drive immediate bid exclusions.

AI & Engineering Operations

- **AI & LLM Product Innovation:** Architected and deployed a standardized "Google Experiment Agent" and "HFS Score Agent" in the internal Agent Hub, reducing pre/post marketing analysis time by 50% under strict statistical protocols.
- **NLP Cancellation Modeling:** Engineered a customer exit feedback processing pipeline leveraging the ChatGPT API to automatically categorize qualitative logs into real-time quantitative retention metrics.

Senior Business Intelligent Analyst

February 2021–February 2022

Ashley Furniture Industries Inc. — Global manufacturer and retailer of home furnishings

- Led a transformative initiative to deploy Price Variance Analysis, unraveling factors driving sales growth across corporate stores. This allowed the business to shift budgeting, increasing sales by 10%.
- Built a staffing optimization model using Python and a sophisticated regression model rooted in the sales production function, enhancing operational efficiency and driving cost savings. This optimization reduced overstaffing by more than 50%.

Citizen Data Scientist – Digital Transformation

August 2020–February 2021

Tech Data Corporation — Global distributor of technology products, services and solutions

- Engineered a robust churn prediction model within the Small Business Marketing (SMB) domain, resulting in a 12% reduction in customer churn and \$500K+ retained revenue.
- Strategically harnessed Recency, Frequency, Monetary (RFM) analysis using Tableau and Alteryx to identify incremental business opportunities through customer segmentation.
- Integrated multiple data sources to extract, transform, and blend data for robust predictive data science models, including segmentation, propensity, and forecasting.

EDUCATION

Udacity — Nanodegree in Predictive Analytics for Business using Alteryx and Tableau, Online

Spring 2020

Kenyon College — B.A. in Economics (Davis Projects for Peace \$10,000 Grant Winner), GPA 3.4/4.0

May 2012

University of Tampa, Sykes College of Business — M.S. in Finance (Beta Alpha Psi 2015 Member), GPA 3.9/4.0

May 2015

American University — Washington Semester Program: International Business and Trade, GPA 3.9/4.0

Fall 2010
