## SUMMARY

Product analytics leader with 6+ years turning experimentation, funnel economics, and AI tooling into product and growth decisions at a two-sided expert marketplace. I set experimentation standards, build AI agents that scale analysis across teams, and mentor analysts—work that includes decomposing an $8M–$15M+ contribution-margin increase and proving $1M+ in incremental revenue from Performance Max.

**Technical proficiency:** SQL, Python, BigQuery, Snowflake, GA4, Power BI, Tableau, Segment CDP, GitHub, VS Code, Codex, Generative AI & LLM APIs, Alteryx, SAP BW, Asana, MS Office

## CORE COMPETENCIES

- A/B, MAB & Sequential Testing
- LTV, Retention & Cohort Analysis
- AI Agents & Prompt Engineering
- Predictive & Churn Modeling
- Full-Funnel & Marketplace Analytics
- Customer Segmentation (RFM)
- Paid Acquisition & Incrementality
- Analyst Mentorship & Enablement

## PROFESSIONAL EXPERIENCE

### AI Engineering & Product Analytics — February 2022–Present

*Pearl (JustAnswer Inc.) — Online platform that combines AI and human experts to provide verified answers to complex questions*

**Experimentation & Analytics Leadership**

- **Experimentation Standards:** Owned primary-metric design for the company experimentation platform (TAS). Made Net LTV 08 the primary metric for Lead Generation sequential tests, caught and fixed a lift-reporting defect, and validated automated readouts so results were decision-grade for product teams.
- **Product Team Partnership:** Lead analyst for Funnel and Customer Acquisition product teams, presenting readouts after every test and turning results into the next test roadmap. Designed the marketplace demand test around Pro Selection Rate with engagement, CTR, and SIP → CC leading indicators.
- **Team Development:** Train new analysts on experimentation (A/B and MAB design, power and sample sizing, instrumentation, BigQuery) and analytics with reusable decks, notebooks, and video trainings; ramped a new Customer Acquisition analyst to independent experiment ownership.

**Product Strategy & Revenue Growth**

- **Macro Revenue Decompositions:** Decoded an $8M–$15M+ YoY contribution-margin increase with an end-to-end full-funnel decomposition across domain, vertical, channel, country, device, and funnel type, proving growth was driven by Javatar platform expansion and Japan scaling (seven figures each).
- **Telehealth Standalone Optimization:** Built Power BI profiles and 3-year LTV frameworks for Telehealth and Urgent Care. Proved therapy cross-sell sat near zero (<0.2%), shifting product focus to standalone optimization.
- **Sentiment-Driven Product Strategy:** Measured emotional shifts across ~17,000 expert conversations per vertical and turned them into three prioritized, testable features (real-time emotion tagging, expert emotion summaries, resolution summaries), presented at company Analytics and Engineering hackathons.

**Marketing & Customer Acquisition Analytics**

- **Performance Max Incrementality Study:** Evaluated keyword cannibalization, proving Performance Max was a net-positive expansion layer generating 1M+ net-new queries, $1M+ incremental revenue, and a six-figure margin.
- **Geographic PPC Portfolio Design:** Rebuilt paid search funnels to ZIP level, identifying 5.2% structural traffic waste and reallocating budget to high-efficiency rural segments converting at 3.73% LPCR.
- **Margin Decision Tools:** Built a bid-strategy simulator comparing actual vs. simulated margin against cost-weighted Target ROAS, with quarter-level projections across Google Search, Javatar, and Pearl, letting acquisition leaders test bidding decisions before committing budget.

**AI & Engineering Operations**

- **AI Analysis Agents:** Designed and deployed the Google Experiment Agent and HFS Score Agent in the internal Agent Hub, enforcing one statistical protocol for every pre/post test and cutting analysis time ~50%, with a pilot, training, and governance plan to scale across analysts.
- **LLM Text Classification:** Built pipelines using the ChatGPT API and Prompt Studio to turn cancellation feedback and free-text survey responses into quantitative retention and demand metrics.

### Senior Business Intelligence Analyst — February 2021–February 2022

*Ashley Furniture Industries Inc. — Global manufacturer and retailer of home furnishings*

- Led a Price Variance Analysis initiative isolating the drivers of sales growth across corporate stores, shifting budget allocation and increasing sales by 10%.
- Built a Python regression-based staffing optimization model rooted in the sales production function, reducing overstaffing by more than 50%.

### Citizen Data Scientist – Digital Transformation — August 2020–February 2021

*Tech Data Corporation — Global distributor of technology products, services and solutions*

- Built a churn prediction model for Small Business Marketing (SMB), reducing churn 12% and retaining $500K+ in revenue.
- Applied RFM segmentation in Tableau and Alteryx and blended multiple data sources into segmentation, propensity, and forecasting models to surface incremental revenue opportunities.

## EDUCATION

**University of Tampa, Sykes College of Business** — M.S. in Finance (Beta Alpha Psi), GPA 3.9/4.0 — May 2015

**Udacity** — Nanodegree, Predictive Analytics for Business (Alteryx, Tableau) — Spring 2020

**Kenyon College** — B.A. in Economics (Davis Projects for Peace $10,000 Grant Winner), GPA 3.4/4.0 — May 2012

**American University** — Washington Semester: International Business and Trade, GPA 3.9/4.0 — Fall 2010
